EXECUTIVE TEAM

William Quigley - CEO

OPSkins CEO, IGE Board Member,
Disney, USC, Harvard MBA

John Brechisci Jr. - Lead Designer

OPSkins Founder & CTO

Jonathan Yantis - COO

OPSkins COO, IGE Co-Founder,
Game & Crypto Legend

Malcolm CasSelle - President

OPSkins CIO, MIT, Stanford MS

Worldwide Asset eXchange

From the team at OPSkins

What is WAX?

400M gamers currently trade billions of virtual items each month. The team from OPSkins, the world's #1 centralized marketplace for trading video game virtual assets, is developing Worldwide Asset eXchange (WAX), a decentralized platform designed to serve the 400 Million online game players who collect and trade in-game items. WAX will enable anyone to operate a fully functioning virtual item marketplace, similar to OPSkins, with zero investment in security infrastructure and payment processing. WAX is a decentralized, fully functioning exchange in a widget.

“WAX is the onramp for mass market cryptocurrency adoption.”

-William Quigley, WAX CEO

What is the Market Opportunity?

Over 400M gamers purchase close to \$50B dollars in virtual items annually. The virtual item trading industry is fragmented across hundreds of competing marketplaces, each utilizing different business practices tailored for their region. This creates significant territorial supply and demand imbalances. The ideal solution to this problem is a global virtual item repository accessible to anyone that provides a complete catalog of all items available for sale in real time. Such a repository, when coupled with a reliable and low cost settlement network, will vastly improve price discovery and market liquidity.

How does the WAX Token work?

WAX Tokens act as stored value for acquiring in-game items and as smart contracts for buying, selling, renting and trading. Building on the OPSkins team's 20 years AND BILLIONS OF TRANSACTIONS of virtual item experience, the WAX Platform will allow the global pool of buyers and sellers to eliminate the many financial risks they encounter from the prevailing consignment-based marketplace model in use today. WAX supports a platform where all market participants - listing and selling agents, settlement fiduciaries, appraisers, affiliates, and buyers and sellers - will merchandise, apportion fees and settle transactions quickly and securely.
